How can a PD/PO Utilize Disinfo Cloud in Efforts to Counter Disinformation?

Challenge

The TET knows PDs/POs have greater, intimate knowledge of the disinformation issues facing the country or region in which they are stationed. Insights on these challenges are shared with Desk Officers, but the means to tackle them can be scattered or lacking.

Tool

Disinfo Cloud is an open source, unclassified platform that allows stakeholders to search for assessed tools or technologies that fit identified needs or requirements, launched in August 2019

Solution

Tell us your challenges, ask us what tools can help you, or show us a tool you're interested in! TET can help you shape a test proposal that will facilitate an Embassy's CPD efforts. Don't see a tool that you need? Let us know! We seek your feedback and insights and want to help you move the mission forward.

A Look inside Disinfo Cloud

The **dashboard** shows the number of technologies currently on the testbed, the number of technologies at each stage of assessment, and the types of technologies they represent.

Disinfo Cloud incorporates a three stage assessment and testing approach designed to identify the most useful technologies.

Stage 1: Conduct Open Source Vetting;
Stage 2: Delve into Technical Due Diligence;
Stage 3: bring on the fun...Product Testing!

Disinfo Cloud also offers a **continuously updated newsfeed** of latest research, news, and related events published by third parties.

A **green prompt button** in the bottom right corner encourages users to offer feedback such as new tools to assess new operational scenarios against which to test technologies, or input on features and usability of the site.
